Get ready to bolster your peds pharm knowledge! How familiar are you with cannabis hyperemesis syndrome, a newer issue increasingly affecting adolescents? How do you tailor primary care for children receiving biologics / immunomodulators? This module covers an extensive list of medication topics related to constipation, asthma, seizures, diabetes, rheumatology, IBS, and serious cutaneous reactions. Legislative and regulatory issues are also discussed. The reference for this reduced-cost module is a single textbook, *Pediatric Psychopharmacology for Primary Care*, purchased separately from AAP with a special discount. **$85** Learn more.

Psychopharmacology
2nd Edition
Pediatric Updates
7.5 Contact Hours

Topics include ADHD, depression, OCD, anxiety-related disorders, autism, and more. Contraindications, U.S. boxed warnings, adverse effects, drug-drug interactions, toxicities of different agents, and off-label use of select medications are addressed. This module is supported by a respected AAP text (purchased separately with a discount) that offers practical guidance for prescribing and/or monitoring psychopharmacotherapy for children and adolescents. **$35** Learn more.

Pharmacology
Abused & Controlled Substances
Pediatric Updates
7.5 Contact Hours

From neonates to teens, from primary to acute care, this module explores a variety of abused and controlled substances to benefit APRN learning and support patients and families. You'll learn about a wide range of topics, including neonatal abstinence syndrome, opioids, cannabis, and hallucinogen use disorders, stimulant abuse, inhalants, poisoning, and more. **$85** Learn more.
