Indication

Emgality is a prescription medicine used for the preventive treatment of migraine in adults.

Select Safety Information

Do not use Emgality if you are allergic to galcanezumab-gnlm or any of the ingredients in Emgality.

Please see Purpose and Safety Summary on [page 8](#). See Instructions for Use included with the device.

Emgality is a preventive treatment specifically developed for migraine

Historically, many migraine preventive medicines were designed for other conditions. Emgality was specifically developed to bind to CGRP, a substance in the brain that may play a key role in migraine.

CGRP=calcitonin gene-related peptide.

Select Safety Information

Emgality may cause allergic reactions, such as itching, rash, hives, and trouble breathing. Allergic reactions can happen days after using Emgality. Call your healthcare provider or get emergency medical help right away if you have any of the following symptoms, which may be part of an allergic reaction:

- swelling of your face, mouth, tongue, or throat
- trouble breathing

**Please see Purpose and Safety Summary on page 8.

Emgality helps prevent future migraine days, so you can make the most of them

As shown in two 6-month studies of adults who had 4-14 migraine days per month:

Emgality
CUT MIGRAINE DAYS IN HALF
or more

for about 60% of people vs about 39% who took placebo

A
MIGRAINE-FREE MONTH
is possible

12% and 16% on average vs 6% who took placebo

In a 3-month study of adults with 15+ headache days per month, 28% had their monthly migraine days cut in half or more with Emgality compared to 15% who took placebo.

In a 3-month study, the number of adults with 15+ headache days per month who were migraine-free in an average month did not differ between Emgality and placebo.
